JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for in situ microscopy of diamond growth 421
– for physical vapor growth 449

Cellular growth
– of metal alloys 289
– of succionitrile 516
Characterization
– by X-ray diffraction of rubidium ion exchange profiles in potassium titanyl phosphate 259
Computer simulation
– of electro-liquid epitaxy 51
– of quartz growth 481
– of temperature distribution 140
Convection 72, 463, 511, 516, 543

Defects
– in silver chloride 410, 573
– of twin type in indium phosphide 9
– suppression of in gallium phosphide 42
Dendritic growth
– of metal alloys 289
Device characterization
– quantum dots and wires 126, 564
– vertical-cavity lasers 35
Diffusional control
– of dewatering 490
– of elements into gallium antimonide 355
– of implanted cobalt in silicon 435
– of rubidium in potassium titanyl phosphate 259

Epitaxy, see Thin film growth
Etching
– chemical 573

Growth issues, general
– convection in vertical-gradient freeze 543
– crystallization model of horse spleen apoferritin 499
– heat flow in chemical vapor deposition 463
– temperature modeling in Bridgman 140
– theory
– – of compositional distribution in metalorganic vapor phase epitaxy 203
– – of compositional uniformity 150
– – of segregation 138
– thermoelectric effects of solidification 527

Heat flow control
– of chemical vapor deposition 463
Hydrodynamics, see Convection

Kinetics
– of decomposition 329
– of growth 133, 380, 490, 511
– of interface control 9
– of morphological change of ice crystal 133
– of nucleation 277, 474, 490

Lasers, crystals for
– lithium niobate 102
– nonlinear barium borate 253
– nonlinear optical conversions 102
– nonlinear optics 259
Lysozyme 268, 277

Melt growth technique
– by Bridgman–Stockbarger method
– – bifurcation theory of stability 303
– – of strontium barium niobate 89
– – of succinonitrile 516
– by Czochralski method
– – of gallium antimonide 355
– – of indium phosphide 9
– by edge film growth
– – of sapphire 107
– by pulsed laser deposition
– – of zinc oxide 340
– by uniaxial solidification
– – of gallium arsenide 1
– – of metal alloys 289
– by zone refining
– – of selenium 569
Microgravity, growth under
– in MEPHISTO-USMP1 flight 527
– of mercury cadmium telluride 72
Morphological stability
– of alloyed thin films 150
– of ice in water 133
– of peritectic systems 511
– of planar front 516

0022-0248/98/$19.00 © 1998 Elsevier Science B.V. All rights reserved.
PII S0022-0248(98)00379-0

Morphology of
– protein crystals 268

Nucleation
– of diamond 81
– of lysozyme 277
– of oligonucleotide 490
– of potassium hydride phthalate 111
– of twins 9
Numbers
– Peclet 289, 314
– Prandlt 289
– Reynolds 516

Phase diagrams, of
– manganese gallate 234

Quantum dots and wires, see Device characterization

Solution growth
– by flux method
– – of barium borate 253
– – of biomolecules 490
– – of cuprates 65
– – theory of flux control 490
– by hydrothermal growth
– – of quartz 481
– by low temperature method
– – of barite 119
– – of cadmium sulphide 380
– – of potassium hydrogen phthalate 111
– – of silver chloride 410
– by top seeded solution growth
– – of lithium triborate 455
Stefan problem or moving boundary problem
– of microsegregation 289
Superconductivity materials, high T_c
– film
– – of cuprates 65
– – of YBCO by liquid phase epitaxy 221
– – of YBCO via cerium oxide buffer 211
Superlattices, multilayers
– of beryllium-doped layers 559
– of undoped layers 559
Surface energy, determination
– of germanium melt 391

Thin film growth, epitaxy
– by ionized beam epitaxy
– – of cadmium telluride 387
– – of zinc selenide 387
– – of zinc telluride 387
– by laser molecular beam epitaxy
– – of strontium oxide 240
– by liquid phase electro-epitaxy
– – of indium gallium arsenide 51
– by liquid phase epitaxy
– – of indium arsenide phosphide antimonide 194
– by migration enhanced epitaxy
– – of gallium phosphide 42
– by molecular beam epitaxy
– – of aluminum arsenide antimonide 18
– – of gallium arsenide at low temperature 559
– – of gallium arsenide on patterned surfaces 333
– – of gallium nitride 29, 397
– – of gallium nitride on zinc oxide 340
– – of indium aluminum arsenide 564
– – of indium arsenide 126, 564
– – of indium gallium arsenide 363
– – of iron on (0 0 1) magnesium oxide 245
– – of manganese arsenide 228
– – of silicon germanium 197
– – theory of alloy film growth 150
– by sputtering
– – of iron palladium alloy 426
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 421
– – – of gallium nitride on zinc oxide 340
– – through metalorganic chemical vapor deposition
– – – of cadmium telluride 367
– – – of gallium nitride on sapphire 167, 329
– – – of indium gallium arsenide phosphide 35
– – – of indium nitride on sapphire 178
– – – of indium phosphide 347
– – through metalorganic vapor phase epitaxy
– – – of manganese gallate 234

Vapor growth technique
– by chemical transport
– – of indium phosphide 185
– – of mercury cadmium telluride 72
– by chemical vapor deposition
– – of diamond 421
– by evaporation and condensation
– – of biomolecules 490
– – of calcium dicarbide 402
– – of graphitic carbon 402
– – of organic semiconductors 449
– – of strontium dicarbide 402
– by hot wall epitaxy
– – of cadmium telluride 373
– by hydride vapor deposition
– – of gallium nitride 29
– by physical vapor growth
– – of organic semiconductors 449
